BidWit — from tender document to evidence-backed bid draft

agents run on an LLM · everything else is code · the run pauses only at the gates

Every requirement ends as a cited answer, a standard compliance statement, or a gap flagged for a person — none is silently missed.

A crashing part never kills a run: classify falls back to rules, evidence search to flagged gaps, the judge to a no-go gate for a person, the writer to flagged gaps, the checker marks every answer unchecked. Only an unreadable tender ends a run early, and still with a report.
